Excel assignment

Question 1: What is the difference between 'Paste' and 'Paste Special' in Excel? Briefly explain with examples.

ANSWER:--

→**Paste**:- Paste copies everything from the source cell(s) to the destination cell(s).
It pastes Values, Formulas, Formatting, Comments, Cell width
Example:
If cell A1 contains `=SUM(B1:B5)` with yellow color, using Paste will copy:
The formula
The yellow background
All formatting

→**Paste Special:--**Paste Special allows you to paste only selected components like values, formulas, or formats

Common options:

- Paste Values (no formulas)
- Paste Formulas
- Paste Formats
- Paste Transpose
- Paste Multiply/Add

Example:
If cell A1 contains `=SUM(B1:B5)` and you use Paste Special → Values,
only the result (number) is pasted, not the formula.

Question 2: Describe the functions and usefulness of 'Freeze Panes' and 'Split Panes' in Excel.
ANSWER:- Freeze Panes in Excel

Freeze Panes is used when we want certain rows or columns to stay visible while scrolling through a worksheet. It is very useful when working with large data because it helps us keep headings or important labels in view. For example, if the first row contains column headings, freezing the top row allows the headings to remain visible even when we scroll down to see more data.

Split Panes in Excel

Split Panes is used to divide the worksheet into different sections so that we can view multiple parts of the same sheet at the same time. Each section can be scrolled independently, which is helpful for comparing data from different areas. For example, by splitting the sheet, we can view the top and bottom rows of a large worksheet simultaneously.

Question 3: Explain the difference between inserting a new row and inserting a new column in Excel. Can you insert multiple rows or columns at once?

Answer:-- In Excel, inserting a **new row** means adding a horizontal line of cells to enter additional data. When a new row is inserted, the existing rows move downward to make space.

Inserting a **new column** means adding a vertical line of cells. When a new column is inserted, the existing columns shift to the right.

Yes, Excel allows us to insert **multiple rows or columns at the same time**. By selecting multiple rows or columns first and then choosing the insert option, Excel will add the same number of new rows or columns as selected.

Question 4: What are logical functions in Excel? Provide examples of at least two logical functions and their applications.

Answer:-- Logical functions in Excel are used to make decisions by testing conditions and returning results based on whether the condition is true or false.

1. IF Function
The IF function checks a condition and returns one value if the condition is true and another value if it is false.

Example:
=IF(A1>=40,"Pass","Fail")
This formula is used to determine whether a student has passed or failed based on marks.

2. AND Function
The AND function checks multiple conditions at the same time and returns TRUE only if all conditions are true.

Example:
=AND(A1>=40,B1>=40)
This function is useful when a student must pass in all subjects to be considered successful.

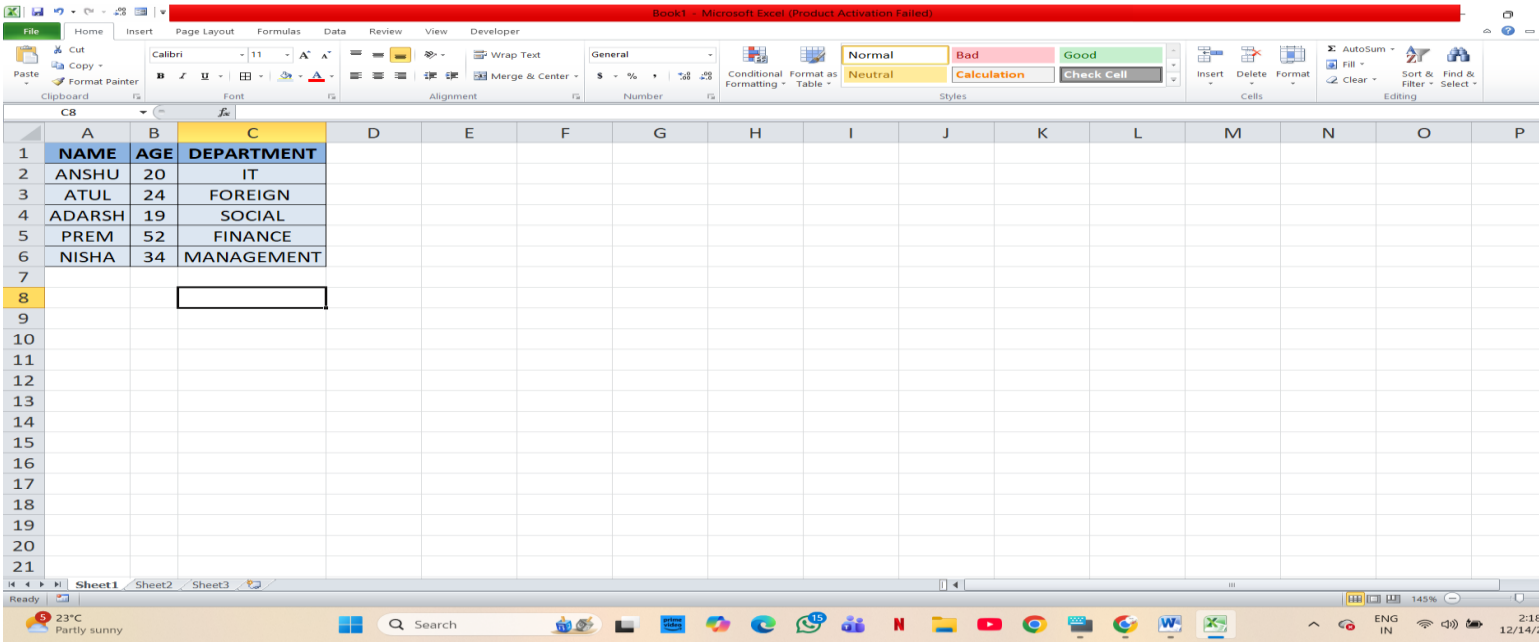
Question 5: Discuss the purpose of 'XLOOKUP' and how it differs from the traditional 'VLOOKUP' function.

Answer:-- XLOOKUP is a modern lookup function in Excel used to search for a value in a range and return a corresponding result from another range. It is more flexible and reliable than older lookup functions and works well with large and complex datasets.

- **XLOOKUP can search both vertically and horizontally, while VLOOKUP works only vertically.**
- **XLOOKUP allows exact match by default, whereas VLOOKUP requires additional settings.**
- **XLOOKUP is more flexible and easier to use compared to VLOOKUP.**

Question 6: Create a worksheet titled 'Employee Data' with columns: Name, Age, Department. Add 5 rows of data. Format as follows:

- Bold and center-align the header row
- Apply a fill color
- Auto-fit column width

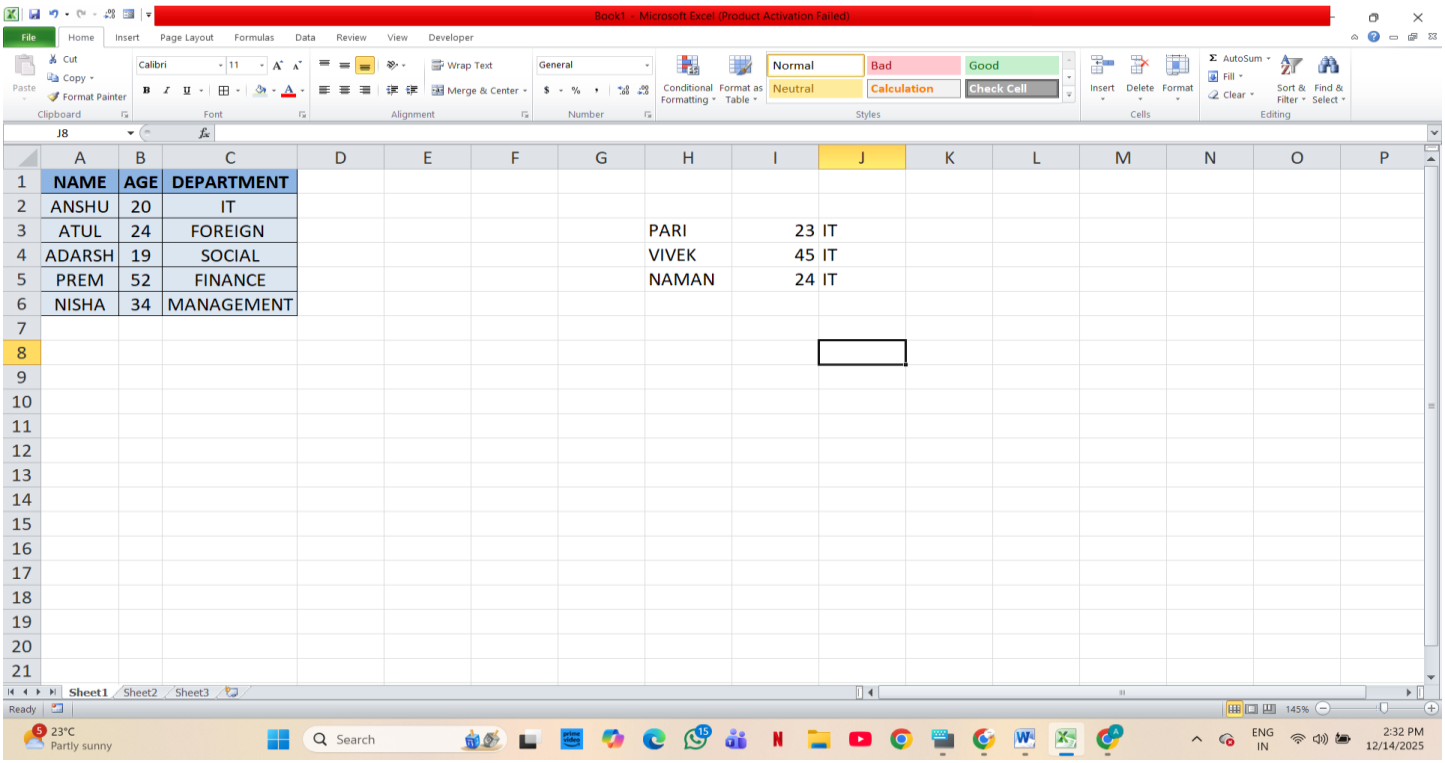


NAME	AGE	DEPARTMENT
ANSHU	20	IT
ATUL	24	FOREIGN
ADARSH	19	SOCIAL
PREM	52	FINANCE
NISHA	34	MANAGEMENT

Answer:-

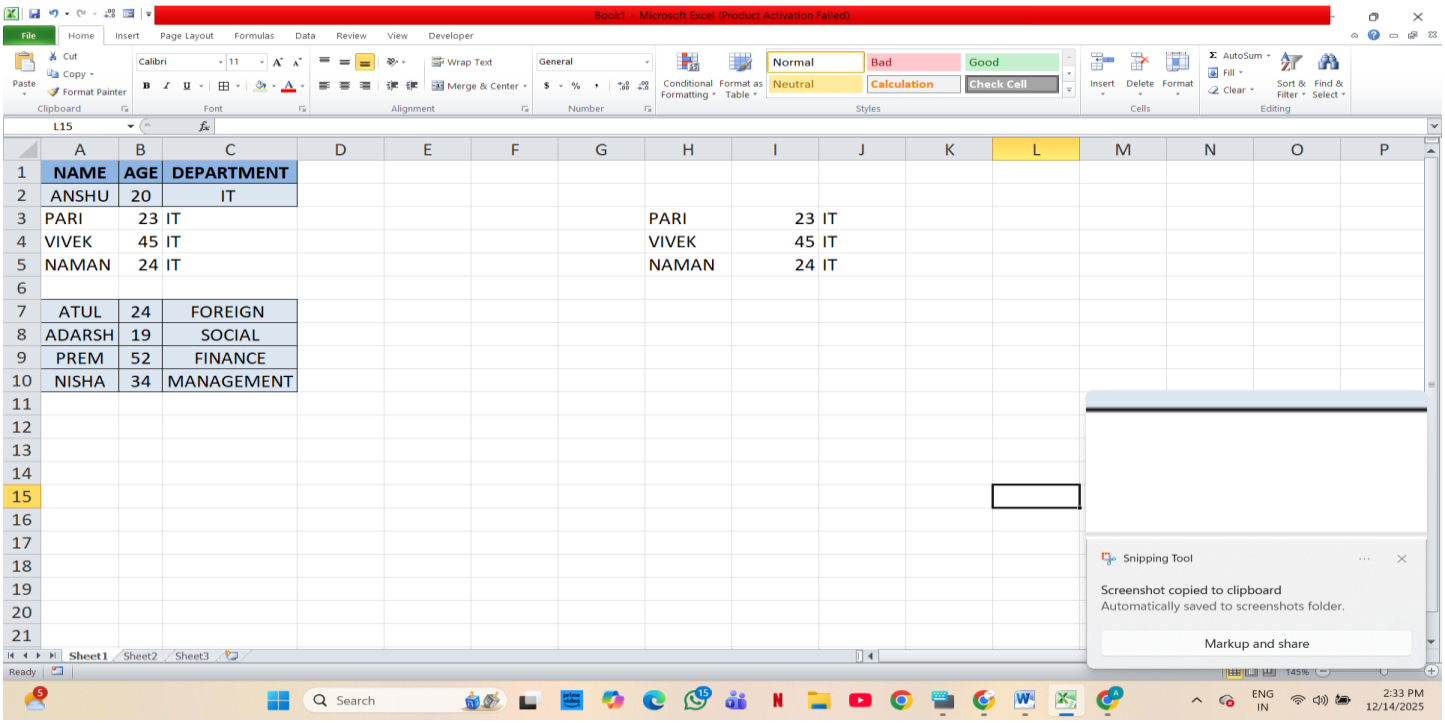
Question 7: Demonstrate how to insert and delete multiple rows and columns in Excel.

ANSWER:--

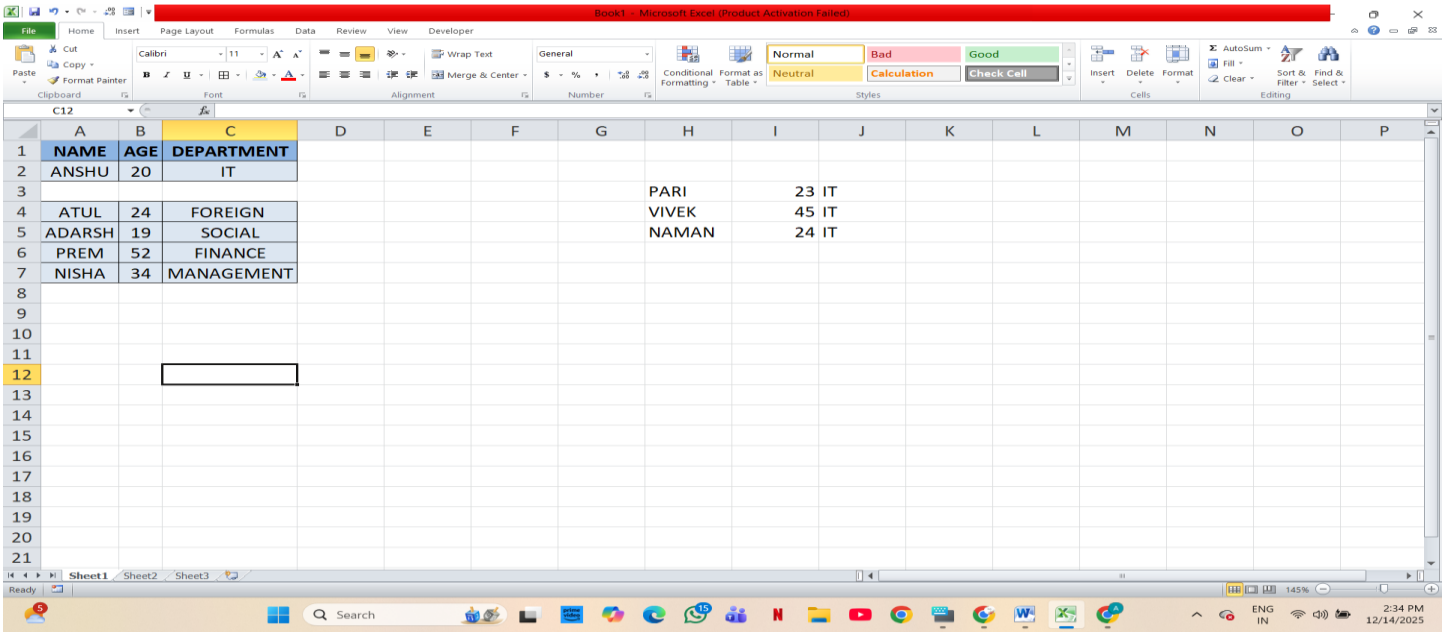


AFTER INSERTING MULTIPLE ROWS

A

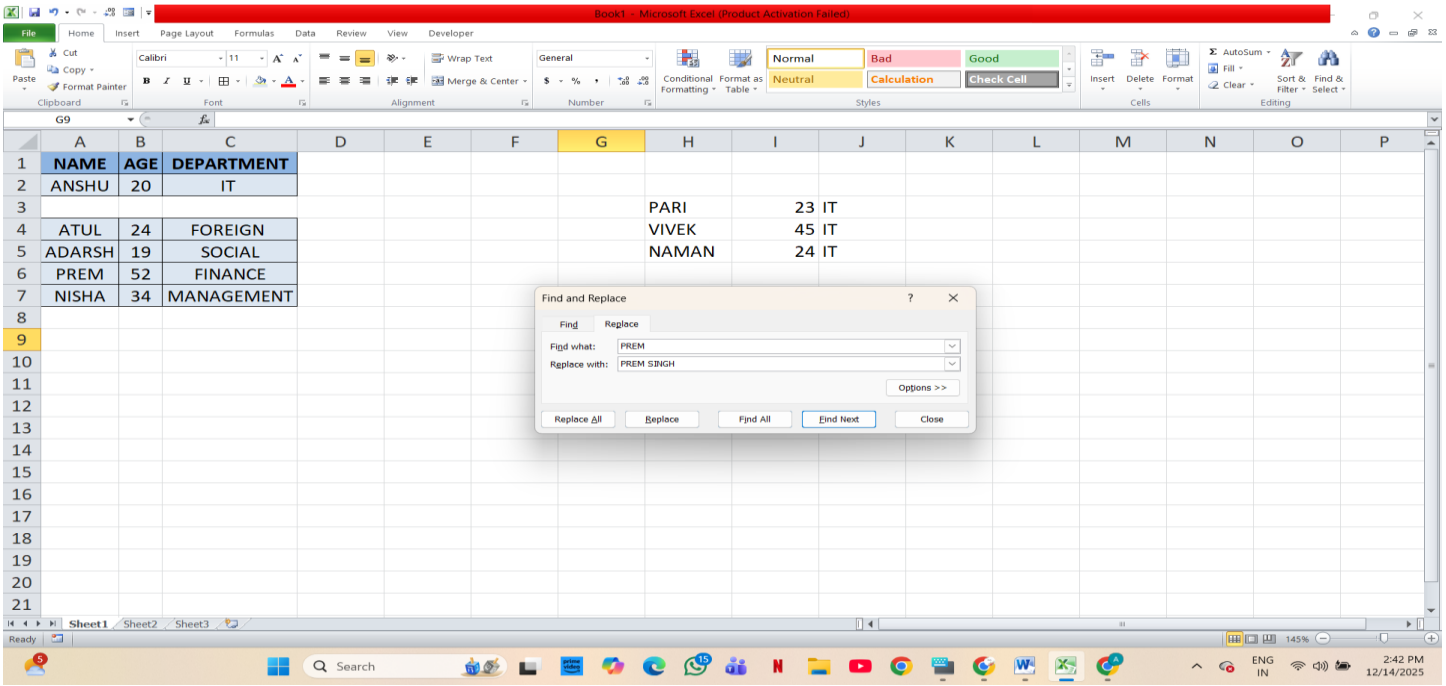


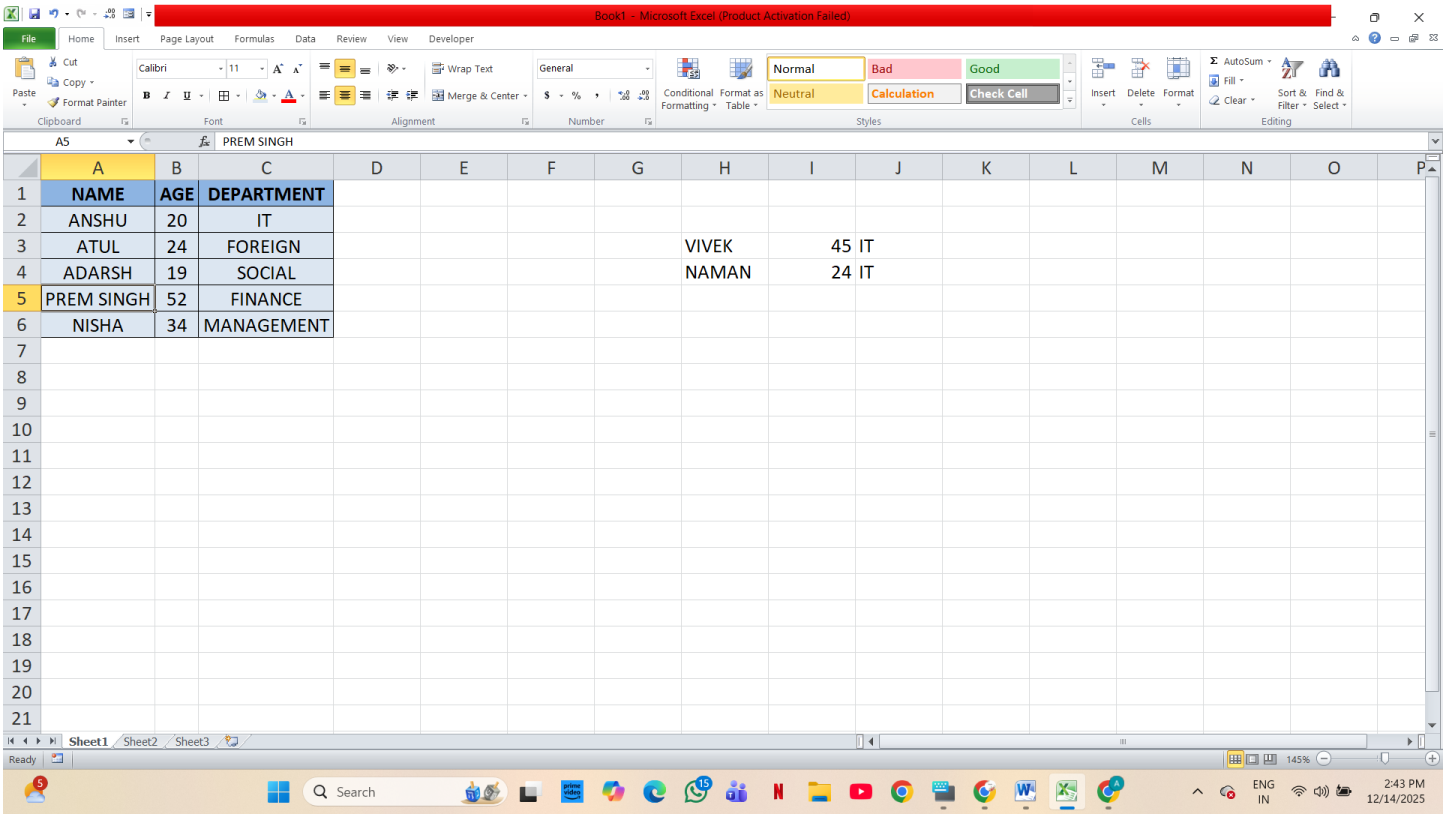
AFTER DELETIN MULTIPLE ROWS



Question 8: Use Excel's 'Find and Replace' feature to update department names in a sample table.

ANSWER:-



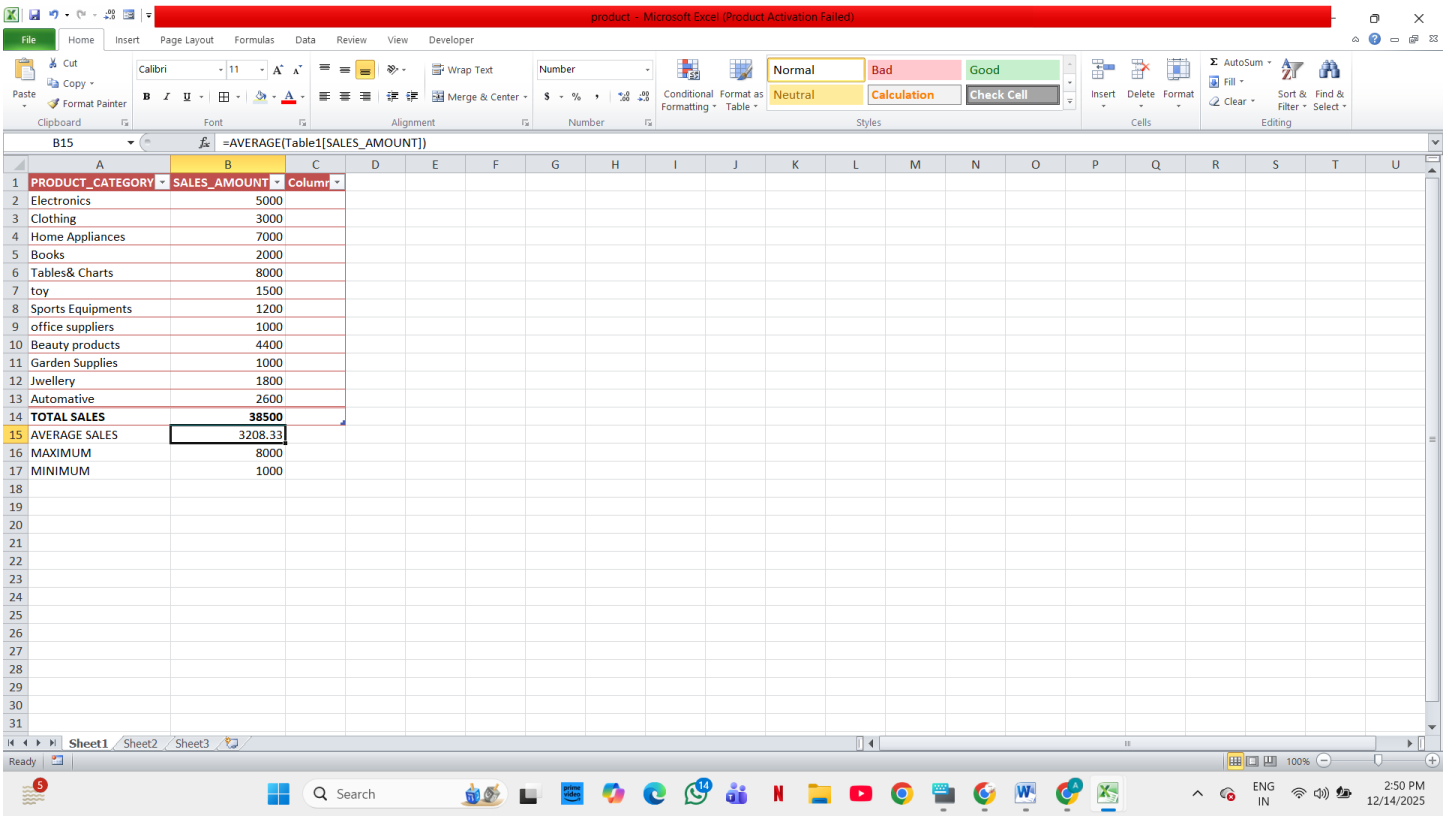


NAME	AGE	DEPARTMENT
ANSHU	20	IT
ATUL	24	FOREIGN
ADARSH	19	SOCIAL
PREM SINGH	52	FINANCE
NISHA	34	MANAGEMENT

VIVEK	45	IT
NAMAN	24	IT

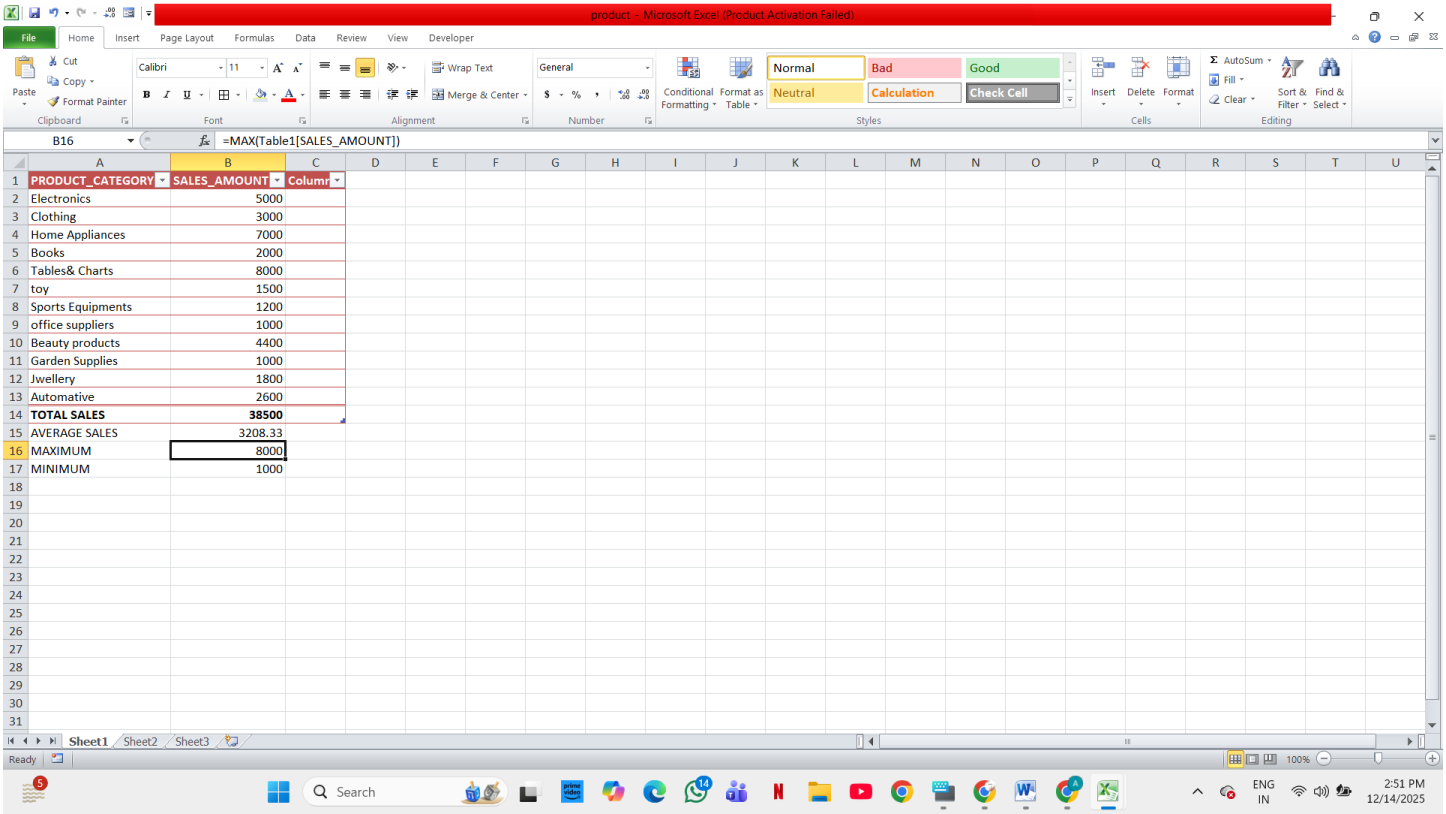
Question 9: Create a small numerical dataset and apply the following functions: ● AVERAGE ● MAX ● MIN

ANSWER:-- AVERAGE



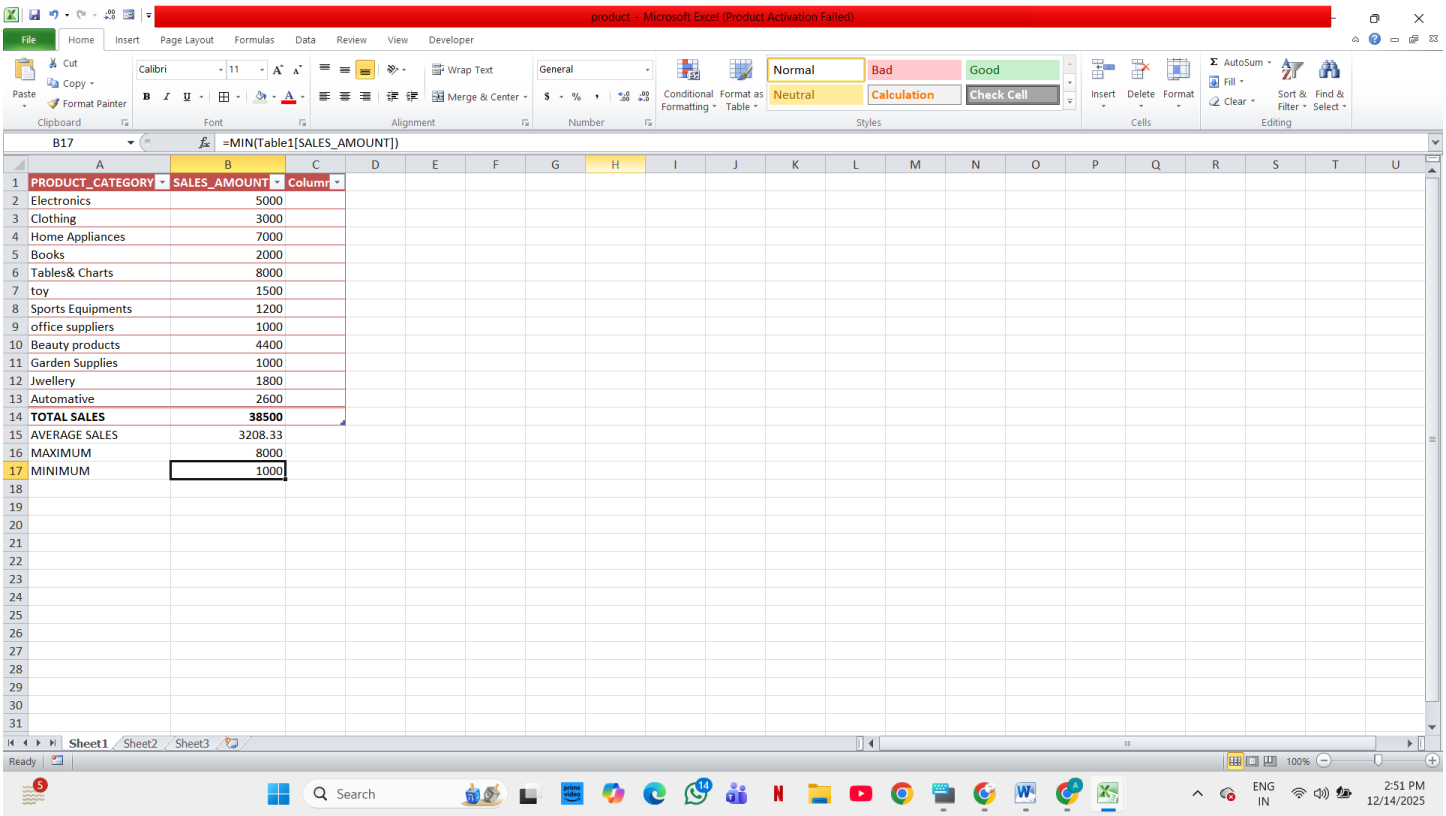
PRODUCT_CATEGORY	SALES_AMOUNT	Column
Electronics	5000	
Clothing	3000	
Home Appliances	7000	
Books	2000	
Tables& Charts	8000	
toy	1500	
Sports Equipments	1200	
office suppliers	1000	
Beauty products	4400	
Garden Supplies	1000	
Jwellery	1800	
Automative	2600	
TOTAL SALES	**38500**	
AVERAGE SALES	3208.33	
MAXIMUM	8000	
MINIMUM	1000	

MAX



PRODUCT_CATEGORY	SALES_AMOUNT	Column
Electronics	5000	
Clothing	3000	
Home Appliances	7000	
Books	2000	
Tables& Charts	8000	
toy	1500	
Sports Equipments	1200	
office suppliers	1000	
Beauty products	4400	
Garden Supplies	1000	
Jwellery	1800	
Automative	2600	
TOTAL SALES	**38500**	
AVERAGE SALES	3208.33	
MAXIMUM	8000	
MINIMUM	1000	

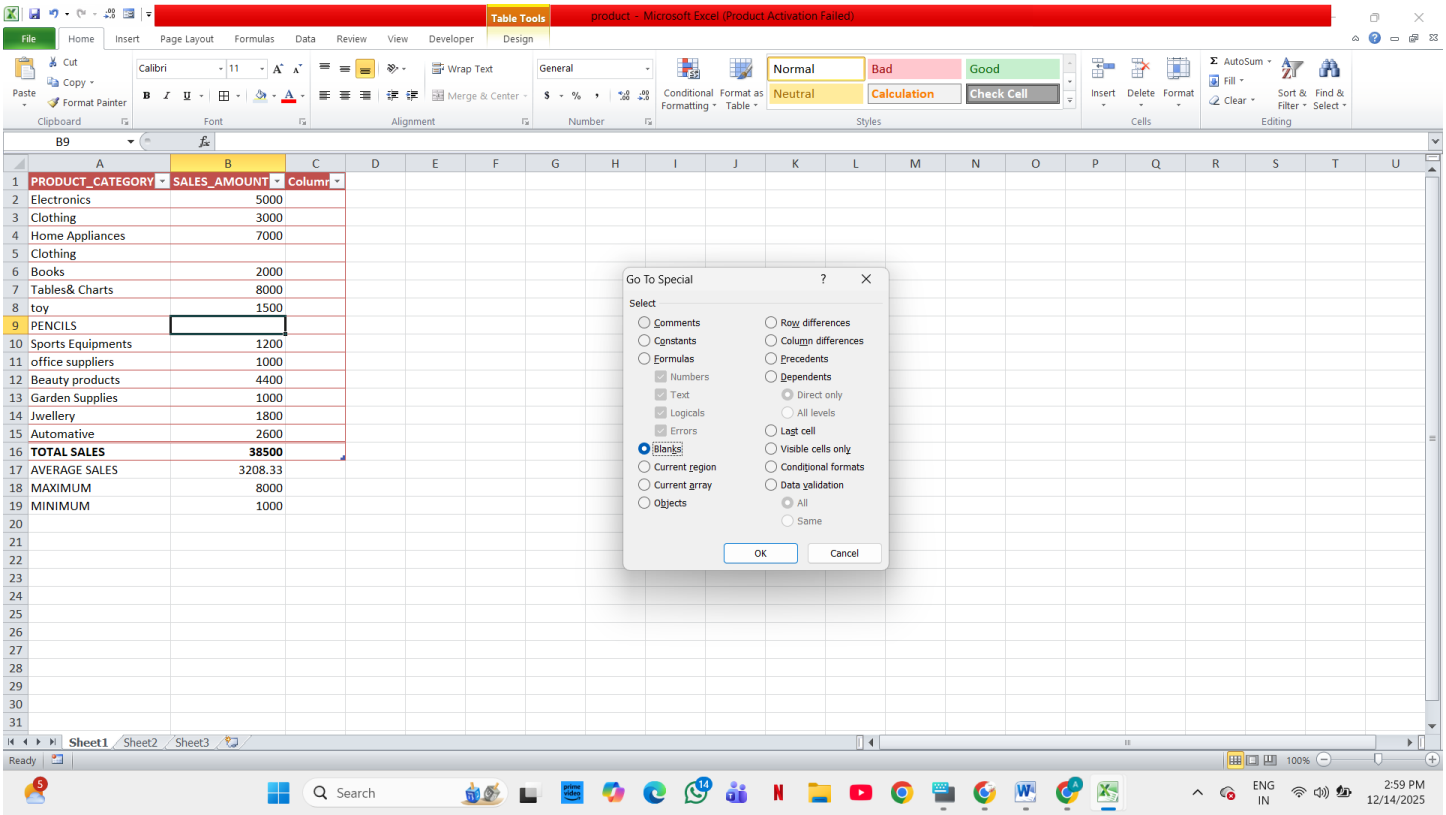
MIN



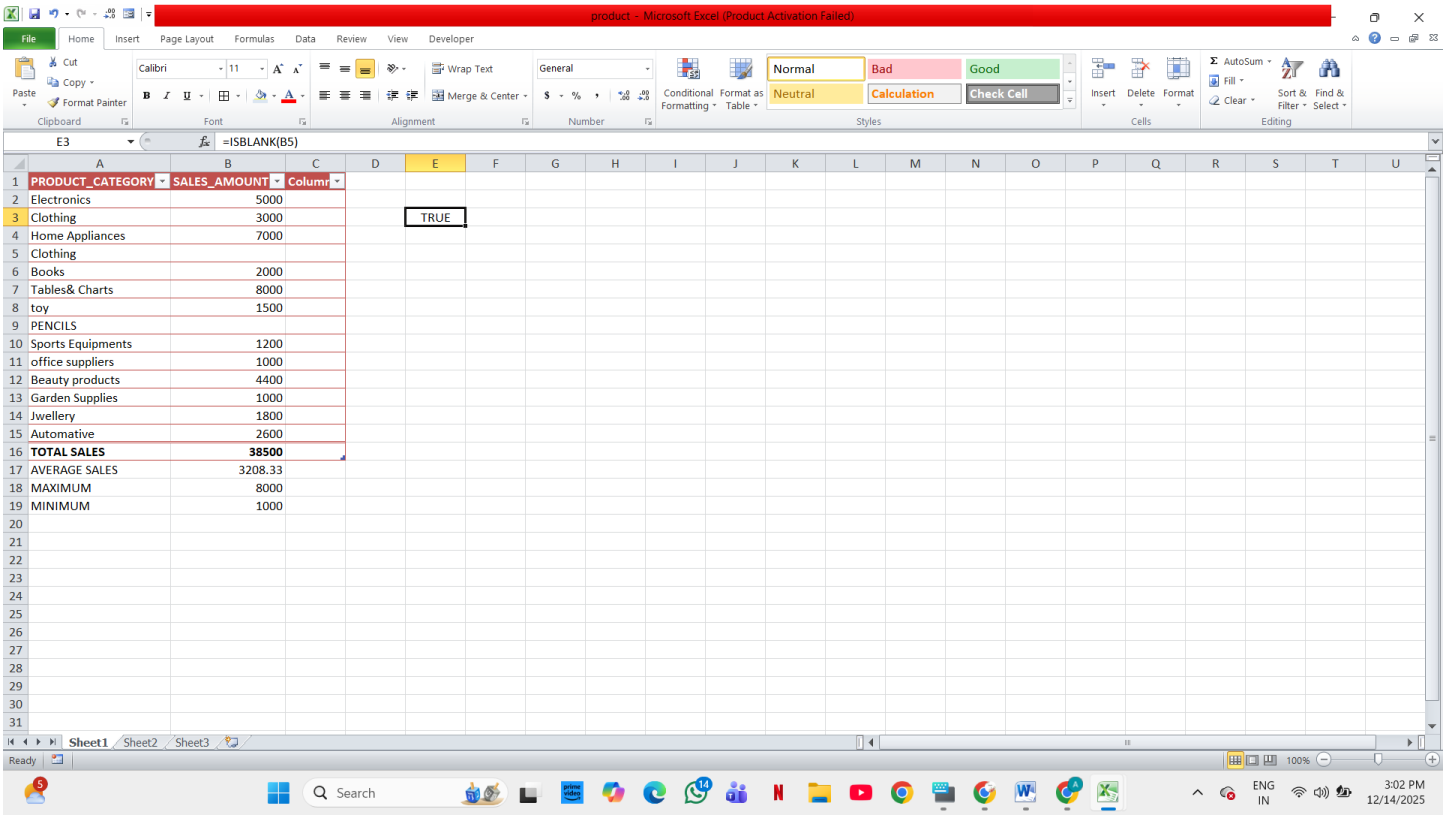
PRODUCT_CATEGORY	SALES_AMOUNT	Column
Electronics	5000	
Clothing	3000	
Home Appliances	7000	
Books	2000	
Tables& Charts	8000	
toy	1500	
Sports Equipments	1200	
office suppliers	1000	
Beauty products	4400	
Garden Supplies	1000	
Jwellery	1800	
Automative	2600	
TOTAL SALES	**38500**	
AVERAGE SALES	3208.33	
MAXIMUM	8000	
MINIMUM	1000	

Question 10: You're working with a dataset that contains missing values. As a Data Scientist, explain how you'd detect and handle missing data using Excel. Mention tools like:

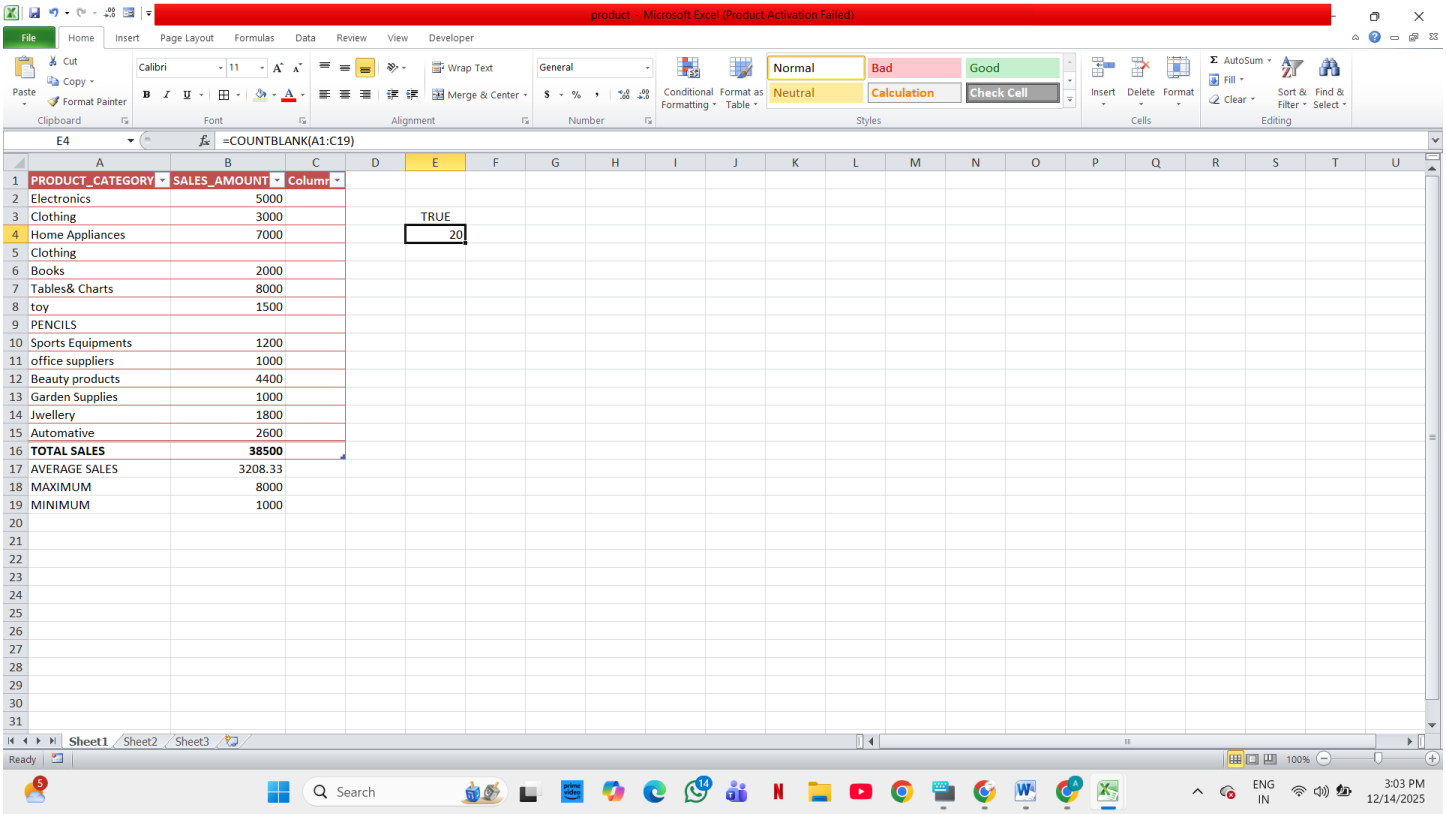
- Go To Special



- ISBLANK



- COUNTBLANK



PRODUCT_CATEGORY	SALES_AMOUNT	Column
Electronics	5000	
Clothing	3000	
Home Appliances	7000	
Clothing		
Books	2000	
Tables& Charts	8000	
toy	1500	
PENCILS		
Sports Equipments	1200	
office suppliers	1000	
Beauty products	4400	
Garden Supplies	1000	
Jwellery	1800	
Automative	2600	
TOTAL SALES	**38500**	
AVERAGE SALES	3208.33	
MAXIMUM	8000	
MINIMUM	1000
